Toner remaining check function: This function notifies you when there is little toner remaining in the cartridge, as well as notifying your authorized service representative automatically by remote service.

Image quality optimization function: This function controls image quality according to the characteristics of the toner to be used and enables you to print images of an optimal quality.

If you are using a toner cartridge other than the one we recommend, the equipment may not be able to detect whether it is installed or not. Therefore, even if the toner cartridge is correctly installed, the error message "ERROR: TONER" appears on the LCD screen and printing may not be performed. You may also not be able to utilize the image quality optimization function, the toner remaining check function, and the remote service function which notifies your service representative automatically.

If you are using a toner cartridge other than the one we recommend, toner is not recognized. If this is a problem for you, please contact your service representative. Remember you will not be able to utilize the Toner remaining check function and Image quality optimization function as we mentioned.

Do not catch your fingers in the drawer when closing it.
This could cause injury.

Register the paper size into the equipment.

When you load paper in the drawer for the first time, register the paper size. Be sure to register it correctly, otherwise it could cause a paper misfeed.

For the registration, see the following page:

 P.32 "Preparation 3 - Registering Paper Size and Type"

Note

Be sure to register the paper size each time you have changed it.

■ Loading paper in the drawers of Paper Feed Pedestal

For the acceptable paper, see the following page:

📖 P.20 "Acceptable paper types"

- 1** Turn the power of the equipment ON.
- 2** Pull out the drawer carefully.

- 3** Pull out the trailing guide while pushing its lower part to the direction of the arrow. Then reinstall the guide at the position of the desired paper size.

Tip

The paper size is indicated on the bottom inner surface of the drawer.

- 4** Push the right side of the side guide lock to unlock it.

5 While pushing the green knob of the side guides, adjust the side guides at the position of the desired paper size.

Note

Adjust the side guides with both hands.

6 Load paper face up in the drawer.

Notes

- Up to 550 sheets (80 g/m² or 20 lb. Bond) can be loaded. Be sure that the height of the stacked paper does not exceed the line indicated inside of the guide.
 P.20 "Acceptable paper types"
- Fan the paper well before loading it in the drawer, otherwise multiple feeding could occur. Be careful not to cut your fingers.
- Place the paper face up. The printable side may be noted on its packaging.

7 Adjust the side guides.

Be sure that a gap of approx. 0.5 mm (0.02") (1.0 mm (0.04") or less in total) is left between the paper and each side guide (shown as "A" in the picture). If the gap is inappropriate, this could cause a paper misfeed.

8 Push the left side of the side guide lock to lock it.

■ Loading paper on the bypass tray

Note

The contents of the original(s) are rotated when copied on paper of the following sizes fed from the bypass tray.

A/B format: A3, A4-R, A5-R, B4, B5-R, FOLIO

LT format: LD, LG, LT-R, ST-R, COMP, 13"LG, 8.5"SQ

K format: 8K, 16K-R

For example, to copy an A5-size original, place the original on the original glass in A5 portrait orientation and paper on the bypass tray in A5 landscape orientation (A5-R).

To enlarge an A4-size original to A3, place the original on the original glass in A4 portrait orientation and A3 paper on the bypass tray.

The illustrations below are example of loading A4/LT size paper.

For the acceptable paper, see the following page:

P.20 "Acceptable paper types"

1 Open the bypass tray.

2 Pull the paper holding lever out, and then load paper face down and straight on the bypass tray.

Note

The printable side may be noted on its packaging.

3 Align the side guides with the edges of the paper, and then push back the lever.

Notes

- Up to 100 sheets of plain paper (80 g/m² or 20 lb. Bond) can be loaded. Be sure that the height of the stacked paper does not exceed the indicators of the side guides. If paper other than plain is used, set it one sheet at a time.
- Fan the paper well before loading it on the bypass tray, otherwise multiple feeding could occur. Be careful not to cut your fingers.
- Do not push the paper forcibly into the entrance of the bypass feeder, otherwise it could cause a paper misfeed.

Tip

When you use paper longer than the bypass tray size, pull out the paper holder from the tray.

■ Loading an envelope on the bypass tray

For the acceptable envelope sizes, see the following page:

📖 P.20 "Acceptable paper types"

Notes for using envelopes

Do not use the following envelopes, otherwise they may cause a paper misfeed or damage to the equipment.

1. Badly curled, wrinkled or folded envelopes
2. Extremely thick or thin envelopes
3. Wet or damp envelopes
4. Torn envelopes
5. Envelopes which include the contents
6. Non-standard size envelopes (ones with a special shape)
7. Envelopes with eyelets or windows
8. Envelopes sealed with adhesive paste or tape
9. Partly-opened or perforated envelopes
10. Envelopes with special coating on the surface
11. Envelopes with glue or double-sided adhesive tape

Note

Store envelopes at room temperature and away from heat and moisture.

1 Place an envelope on a flat clean surface and press it with your hands in the arrow directions as shown below to expel air from the inside.

Press it well to prevent the flap from rolling upward.

Correct bent corners of the envelope.

2 Open the bypass tray.

3 Pull the paper holding lever out, and then load the envelope face down on the bypass tray.

Place the envelope with its flap side at the front as shown below.

Note

Do not copy or print on the back of envelopes, otherwise it may cause a paper misfeed or soil them or the inside of the equipment.

- 4** Align the side guides to the edges of the envelope, and then push back the lever.

■ Acceptable originals

Acceptable originals differ depending on the setting position. See the table below for more details.

If you are using the Reversing Automatic Document Feeder, you can automatically scan a stack of plain paper originals at one time.

Setting position	Type	Maximum size	Acceptable sizes for automatic size detection	Maximum number of sheets
Original glass	Plain paper Special paper Booklets	A3 or LD	Other than North America and China: A3, A4, A4-R, A5, A5-R, B4, B5, B5-R North America: LD, LG, LT, LT-R, ST, ST-R China: A3, A4, A4-R, A5, A5-R, B4, B5, B5-R, 8K, 16K, 16K-R	-
Reversing Automatic Document Feeder	Plain paper (50 - 104 g/m ² , 13 - 27 lb. Bond)		Other than North America and China: A3, A4, A4-R, A5-R, B4, B5, B5-R North America: LD, LG, LT, LT-R, ST-R, COMP China: A3, A4, A4-R, A5-R, 8K, 16K, 16K-R	50 sheets (80 g/m ² , 20 lb. Bond) (or stack height 9.5 mm)*1

*1 The maximum number of sheets acceptable varies depending on the type of original.

❑ Maximum number of originals scanned at one time

You can scan up to 50 original sheets at one time. When the number of sheets to be scanned exceeds 50 or the built-in memory in the equipment is full, scanning stops and an error message is displayed on the LCD screen. Press any button on the control panel to delete the scanned data.

❑ Precautions for Reversing Automatic Document Feeder

Do not use the following types of original as they may cause a paper misfeed or damage to the equipment:

- Originals that are folded or curled
- Originals with carbon copies
- Originals that have been taped, pasted, or cut-out
- Originals that have been clipped or stapled
- Originals with holes or tears
- Originals that are damp
- Overhead transparencies or tracing paper
- Coated paper (e.g. coated with wax)
- Originals with multiple holes punched (e.g. loose leaf paper)

The following types of originals can be used but need extra care:

- Originals that you cannot slide with your fingers or whose surface is specially treated (they may not be able to be separated from each other at feeding)
- Originals that are folded or curled (should be smoothed out before being used)

When black streaks appear

If the scanning area or the guide area is dirty, image problems such as black streaks may occur. Weekly cleaning of these areas is recommended.

📖 P.164 “Regular Cleaning”

■ Copying originals

Follow the common basic instructions below to make a copy.

1 Place the original(s).

• Placing originals on the original glass

- 1) Raise the Platen Cover or the Reversing Automatic Document Feeder.
- 2) Place the original face down on the original glass.
- 3) Align the original with the top-left corner of the original glass.
- 4) Lower the Platen Cover or the Reversing Automatic Document Feeder carefully.

⚠ CAUTION

Do not place heavy objects (4 kg/8.8 lb. or over) on the original glass and do not force it down.
It may break the glass and could cause injury.

Notes

- When you copy originals with folds or wrinkles, smooth out the folds and wrinkles first. Then, place the original on the original glass and close the Platen Cover or the Reversing Automatic Document Feeder to start copying.
- If a shadow of the folds or wrinkles appears on copies although you smooth out them, adjust the exposure or use the "BACKGROUND ERASE" function.
- When you place a booklet-type original, strong light may leak out while copying. Do not look directly at the original glass.
- When you place a thick booklet, do not close the Platen Cover or the Reversing Automatic Document Feeder forcefully; you can still make copies without closing the cover or feeder.
- If the size of the original is not detected correctly, set the size manually.
📖 P.44 "Enlarging or reducing the copy size"

Tip

When you use the transparent original such as overhead transparencies and tracing paper, place a blank plain sheet of paper - the same size or a larger sheet - over the original, otherwise the copied image could be stained.

- **Placing originals on the Reversing Automatic Document Feeder**

- 1) Align all the originals.
- 2) Place them face up and align the side guides to the original length.

Notes

- The top sheet of the originals will be scanned first.
- Do not load more than 50 originals (80 g/m², 20 lb. Bond) at once, and make sure the thickness of the stack of originals does not exceed 9.5 mm regardless of their size.
- To prevent long originals (A3, B4, A4-R, LD, LG, COMP, or 8K) from sliding out, raise the paper exit stopper. When you have finished using the stopper, lift it slightly and slide it back in.

- To prevent misfeeding, do not leave originals or turn OFF/ON the equipment with originals on the Reversing Automatic Document Feeder.

2 Press [COPY].

3 Enter the number of copies with the digital keys.

4 Make the copy settings as required.

Notes

- If the paper source runs out of paper, an error message is displayed on the LCD screen and copying stops. Load paper. The equipment automatically resumes copying after approx. 3 seconds have passed.
- The receiving tray can hold up to 100 sheets. If the excessive paper error occurs, the lamp blinks and an error message is displayed on the LCD screen. Remove the paper from the tray and press [START] to resume copying.
- When you use overhead transparencies, remove them one by one every time they are ejected. Otherwise, they could be curled and not be good for projection.

📖 P.72 “How to print”

■ Considerations and limitations

- Some print options can be set from both the application and the printer driver, such as collation. If the collation is set from the application, documents may not be properly printed. If that happens, use the printer driver to set the collation. Depending on the application, some print options such as the orientation need to be set from the application. For print options that can be set from both the application and the driver, refer to the manual of the application.
- When you print from your PC while another user uses the equipment for copying, the printing starts after approx. 30 seconds have passed since another user finishes the operation for copying.

■ How to print

Once you have installed the printer driver and configured it properly, you can print directly from most Windows applications. Simply choose the Print command from your application.

You can print using the various functions by setting print options on the printer driver.

Scanning From Application

This equipment supports scanning from TWAIN-compatible applications. TWAIN is the standard that links applications and scanners that acquire images. For TWAIN support, see your application's manual.

Before you start scanning with this equipment, make sure that you have installed the scanner driver. For details, refer to the **Software Installation Guide**.

Notes

- Scanning cannot be performed from a computer immediately after the power is turned ON, the buttons are pressed or the covers are opened/closed in the equipment. Do it 30 seconds after "Ready" has appeared on the LCD screen on the control panel.
- The default original size depends on the measurement system on Windows: A4 for Metric or LT for the North America. You can change the default only before the first execution after installation. For the measurement system, see the Windows Help.

Network Menu List

You can set various network functions.

Tip

For instructions on how to display the NETWORK menu, see the following page:
 P.135 “User Functions Menu List”

- P.133 “Setting the Ethernet speed”
- P.133 “Setting the TCP/IP protocol”
- P.134 “Setting the HTTP network service”

Note

Once the network has been set up, exit from USER FUNCTIONS menu by pressing [CANCEL] or [USER FUNCTIONS] button. When “APPLY AND REBOOT?” message appears, select “YES”, and then press [OK]. The equipment is automatically rebooted and the network settings are applied.

■ Setting the Ethernet speed

You can specify the Ethernet speed.

Item name	Description
AUTO 10MBPS HALF DUPLEX 10MBPS FULL DUPLEX 100MBPS HALF DUPLEX 100MBPS FULL DUPLEX	Select the desired combination of communication speed and transmission method.

Note

If the network is not stable, turn the power of the equipment OFF and then back ON.

■ Setting the TCP/IP protocol

You can set the TCP/IP protocol that is commonly used in most network systems. When using Web-based utilities such as TopAccess or network features of this equipment such as network printing and network scanning, you are required to set the TCP/IP protocol.
In the TCP/IP setting operation, you can select the addressing mode, as well as assign the IP address, subnet mask and default gateway (when manually assigned).

How the TCP/IP protocol must be set depends on your network environment.

The screenshot shows a menu with the following items: TCP/IP, ADDRESS MODE (highlighted with a right arrow), IP ADDRESS, and SUBNET MASK (with a down arrow).

Item name	Description
ADDRESS MODE	• STATIC IP (When connecting to a local area network using static IP addresses) Select [STATIC IP] and specify an IP address when connecting to a local area network where static IP addresses are used. Also set the subnet mask and default gateway as required. • DYNAMIC (When TCP/IP is set by Auto-IP addressing or DHCP server) Select [DYNAMIC] when you do not know the TCP/IP settings that should be assigned to the equipment. If [DYNAMIC] is selected when your network supports the DHCP, the IP address, subnet mask, default gateway, primary WINS server address, secondary WINS server address, POP3 server address, and SMTP server address are acquired from the DHCP server. If the DHCP is not supported, an appropriate IP address is assigned to this equipment by the auto-IP addressing function. However, the auto-IP addressing may not work properly if a router is placed in the network. • NO AUTO IP (When TCP/IP is set using only the DHCP server) Select [NO AUTO IP] when the equipment is connected to a local area network with a DHCP server and you want to set the TCP/IP not using the auto-IP addressing function, but only the DHCP. When [NO AUTO IP] is selected, the IP address, subnet mask, default gateway, primary WINS server address, secondary WINS server address, POP3 server address, and SMTP server address are acquired from the DHCP server, and the IP address assignment by the auto-IP addressing function is disabled.
IP ADDRESS SUBNET MASK DEFAULT GATEWAY	Press [IP ADDRESS] and enter the IP address of this equipment using the digital keys. Enter the subnet mask and default gateway as required. Use $\triangle$ or ∇ to switch the active box. Note This item is enabled only when [STATIC IP] is selected for [ADDRESS MODE].

Use the digital keys to enter [IP ADDRESS] or [SUBNET MASK] or [DEFAULT GATEWAY].

For entering characters, see the following page.

P.124 "Character entry"

■ Setting the HTTP network service

You can enable or disable the HTTP network server service that provides web-based utilities on this equipment, such as TopAccess.

The screenshot shows a menu with the following items: HTTP, HTTP SERVER (highlighted with a right arrow), and PRIMARY PORT NUMBER.

Item name	Description
HTTP SERVER	• ENABLE — Press this button to use the HTTP network server service. • DISABLE — Press this button to disable the HTTP network server service. This option must be enabled for TopAccess.
PRIMARY PORT NUMBER	Press this button to enter the primary port number to be used for receiving HTTP access from other clients. Normally use the default port number "80".

Use the digital keys to enter [PRIMARY PORT NUMBER].

For entering characters, see the following page.

❑ WIRELESS SETTING

You can configure the Wireless LAN Module if it is installed.
Select Infrastructure Mode or Ad Hoc Mode to specify the security mode.

Notes

- If you do not set no security, anyone knows how the SSID can connect to the wireless network. Therefore, it is recommended to set the security if it is possible.
- Once the WIRELESS SETTING (except WPS) has been set up, exit from USER FUNCTIONS menu by pressing [CANCEL] or [USER FUNCTIONS] button. When "APPLY AND REBOOT?" message appears, select "YES", and then press [OK]. The equipment is automatically rebooted and the WIRELESS SETTING is applied.
- **WPS**
WPS is a standard to allow easy wireless LAN configurations. This equipment supports Push Button Configuration and PIN methods.
The Push Button Configuration method completes the configuration by transmitting the ESSID and encryption key to the wireless LAN device as you press the button on the Access Point.
Whereas the PIN method completes the configuration by transmitting the ESSID and encryption key to the wireless LAN device as you register the PIN generated by the wireless LAN device to the Access Point.
- **WPA2-PSK, WPA2/WPA-PSK**
WPA2 and WPA2/WPA-PSK are authentication methods using the PSK (Pre-Shared Key) between the Access Point and other wireless devices.
To access the wireless network using the WPA2-PSK or WPA2/WPA-PSK authentication, the same PSK passphrase must be assigned in both the Access Point and other wireless devices. If the PSKs are same between the Access Point and other wireless devices, the Access Point allows them to access the wireless network through the Access Point.
- **WEP**
WEP is a data encryption method using the WEP key between the Access Point and other wireless devices. WEP is less secure compared with WPA2 and WPA2/WPA-PSK. If the wireless network is configured in the Infrastructure Mode and the Access Point supports WPA2-PSK or WPA2/WPA-PSK, it is recommended to use WPA2-PSK or WPA2/WPA-PSK rather than WEP.
