Response Rate

The higher the refresh rate, the more frequently the computer receives mouse status information, thus speeding up the reaction time of the mouse pointer. By selecting the desired refresh rate in the drop-down menu, you can switch between 125Hz (8ms), 500Hz (2ms and 1000Hz (1ms). (Recommended setting: 500Hz-1000Hz)
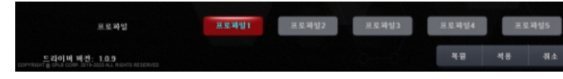

500 Hz

"Advanced options" This option can customize DPI parameters and lighting effects

---

Configuration File

The configuration file is a convenient way to organize and customize. You can set up multiple configuration files according to your own preferences to control at will. Each selection you make in each selection can be saved in the current configuration file or exported and saved as a new configuration file for next use.

"Macro" Programming

"Macro" programming allows you to create a series of precise keystrokes and keystrokes. This programming also allows you to configure many macros and extremely long macro commands as needed.

The function of the "Macro" section is similar to that of the "Profile", you can type the name macro in the field below the macro name.

"Macro" programming also provides other options, such as creating a new macro by clicking a button, button to create a new macro, click the button to delete the current macro to create a macro command, just click the button, and all your keystrokes and key operations will automatically be displayed on the macro screen. After finishing recording the macro command, click the button to end the session.

"Macro" programming allows you to enter the delay time between commands. In the recording delay, the delay between commands is displayed as the time when input. The default delay uses a preset time (in seconds) as the delay. No delay ignores all pauses between keystrokes and keystrokes.

Once the macro is recorded, you can edit the entered commands by selecting each command in the macro screen. Each keystroke or key operation is arranged in order, with the first command displayed at the top of the screen

Button allows you to edit a specific delay time, and the button allows you to delete the command.

6. Precautions

In order to ensure maximum safety during the use of Ajazz AJ52, we strongly recommend that you follow the following guidelines:

1. Avoid looking directly at the tracking beam of the mouse or illuminating the eyes of others with the beam. Please note that the tracking beam is "invisible" to the naked eye, and the tracking beam is set to "permanent connection" mode.

---

2. If you encounter a problem that the device cannot operate normally or the troubleshooting procedures cannot solve the problem, please unplug the device and contact customer service staff for support in time. Do not repair the equipment yourself at any time.

3. Do not disassemble the device (doing so will invalidate the warranty), do not try to repair the mouse by yourself or operate the mouse under abnormal current load.

4. Avoid letting the equipment come into contact with liquids or store in humid environments. Use the device only within the specified temperature range of 0°C (32°F) to 40°C (104°F). If the ambient temperature exceeds this range, please unplug the device and turn it off, and wait for the temperature to stabilize within the appropriate range.

Comfort

Studies have shown that long-term repetitive actions, improper placement of computer peripherals, poor posture, and bad habits can cause physical discomfort and even damage nerves, tendons, and muscles. Follow the guidelines below to avoid injury and ensure optimal comfort during use of Ajazz AJ52.

1. Place the keyboard and monitor directly in front, and place the mouse close to the keyboard. The elbow joints should be as close as possible to the sides of the body, not far away from the body, and the mouse should be placed where it is easy to reach.

2. Adjust the height of the seat and the computer desk to ensure that the height of the keyboard and mouse is not higher than the elbow joint, place your feet naturally, sit in a correct posture, and relax your shoulders.

3. When playing games, your wrists should be relaxed and kept straight. If you need to repeat the same movement with your hands, try not to bend, stretch or twist your feet for a long time. Place your feet naturally, sit upright, and relax your shoulders

---

4. Customize the mouse buttons according to your own game operation habits to minimize repetitive or awkward actions during the game.

5. Don't stay in the same posture all day. Get up and leave the computer desk to do stretching exercises for arms, shoulders, neck and legs.

If you experience pain, numbness or tingling in your hands, wrists, elbows, shoulders, neck or back when using the mouse, please consult a qualified doctor immediately.

7. Maintenance/Use

To maintain the best condition, Ajazz AJ52 requires minimal maintenance. We recommend that you unplug the device from the USB port and clean it with a soft cloth or cotton yarn dampened with a little warm water to prevent accumulation of dust. You can do it once a month. Do not use soap or strong detergents.
